1 Introduction

This document gives a basic sample configuration of X-Lite V3.0 (Build 1106e for Windows) when using MyNetFone's Service.

Note:

We are sorry about we do not provide any quality guarantee when using X-lite on MyNetFone service because the Codec that we prefer is G.729 but X-lite V3.0 doesn't support it.

We recommend our customer using MyNetFone SoftClient because it was designed for our service. It's totally FREE for our customer, Please visit http://www.myfone.com.au/support/ for more details.
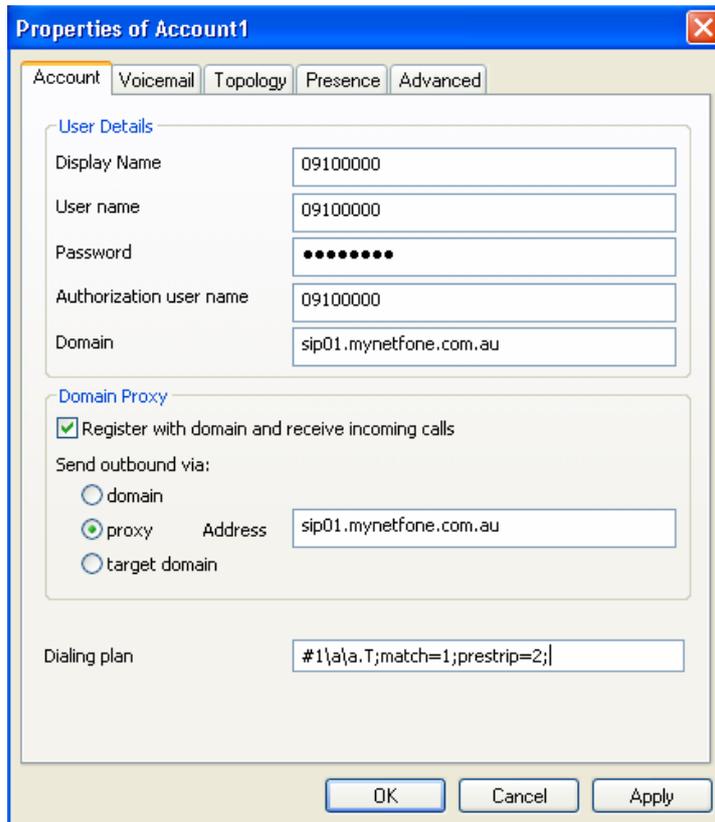

2 Sample Configurations
